DIFFERENCES IN TURNOVER® FOR ISERIES PRODUCTION VERSION

This document describes how the remote production and distribution hub versions of TURNOVER® for iSeries differ from the development version described by the rest of this manual.

OVERVIEW

There are three different versions of TURNOVER® for iSeries that you can license. The **standard version**, also called the “development version,” is the version described by the rest of this guide, and is the software you would install and use on your development computer(s) to create, change, and distribute software.

The **remote version**, also called the “production version,” is the version you would install on a remote computer that is not used for development. This version is capable of receiving and installing changes distributed from a development computer.

The **hub version** is what you would install on a computer that you use as an intermediate distribution computer. This version is capable of receiving and installing changes, as well as subsequently re-distributing them to other production computers.

TURNOVER® for iSeries determines what version is running based on the **authorization code** you apply when you install your software.

Differences in TURNOVER® for iSeries Production Version

Both the **remote** and **hub** versions have the same menu:

Notice that Main Menu options **2**, **5**, **9**, and **12**¹ (Programmer information, Check-in/Checkout, Projects, and the Programmer Worklist) are not available in either version.

7/18/18 12:12:31	TURNOVER® for iSeries Main Menu	Your Company, Inc. YOURSYS
Select one of the following:		
1. Work with application definitions 2. Maintain programmer information 3. Maintain users authority 4. Work with object history 5. Check-out/check-in menu 6. Work with forms 7. Submit a form to run 8. Utility menu 9. Work with Projects and Tasks 10. Reporting menu 11. Distribution menu 12. Programmer Worklist Manager		
Select option:		
F3=Exit	F6=DSPMSG	F12=Cancel
F14=WRKSBMJOB	F24=More keys	

¹ Option **12** varies according to what you have installed on your system, but defaults to the Programmer Worklist.

REMOTE PRODUCTION VERSION

The remote production version is licensed separately from the development version. It's used primarily to receive and install your changes on a remote computer(s). In addition to the Main Menu options described above, the following differences apply:

- You cannot define or work with the helpdesk commands **FASTTASK** and **WORKTASK**. These commands and their associated programs are not included on the production version.
- The **Programmer's Worklist Manager** (PWM) function is not available on the production version. (This includes the **STRPWM** and **C RTPWL** commands and their associated programs.)
- On the **Reporting Menu** (Main Menu option **10**), some reporting options are not included on the production version. Specifically, Reporting menu options **10-14**, **22**, **23**, and **41** are not included on the production version.
- On **Work with Forms** (Main Menu option **6**), you cannot edit a TURNOVER® for iSeries form, *except*:
 - You can change or remove form dependencies;
 - You can copy a TURNOVER® for iSeries form;
 - You can reset a form with a status of **RECOVER** to **RECVD** to be rerun by entering on a command line the command **RESETFOR** with the parameter of form number.
- On the **Distribution Menu** (Main Menu option **11**), you cannot distribute changes to other computers or distribute application definitions to other computers; therefore option **2** and its associated programs are not included on this version.
- **Synchronizer** with its related source compare and merge utilities is not available on the production version.

REMOTE HUB VERSION

The functions for a remote hub distribution version of TURNOVER® for iSeries are identical to the remote version, *except* this version can use option **2** on the **Distribution Menu** to redistribute changes received there to other computers on its network.
