### **THE OVRDBF COMMAND AS A TURNOVER® FOR ISERIES V100 PRE-RUN COMMAND**

Beginning with Release 4.2, TURNOVER® programs were converted to ILE. This means that any time you link an **OVRDBF** command string to a TURNOVER® for iSeries v100 form line, you must specify a value of either **\*CALLLVL** or **\*JOB** for the **OVRSCOPE** parameter.

This is because our program that executes the **OVRDBF** command is an ILE program running in a named activation group. The default value of **\*ACTGRPDFN** on the **OVRDBF** command means that the override will only apply to programs running in that activation group. Because the compile commands provided by OS/400 are not ILE programs, they do not run in the same activation group, and therefore require the change to the **OVRDBF** command.

**Workaround:** Specify the **OVRSCOPE** parameter on the **OVRDBF** command.

### **UPDATING YOUR EXISTING OVRDBF COMMANDS USING A PROGRAM**

You can write a program that updates the **OVRDBF** commands that you already have linked in TURNOVER® for iSeries v100. Your program should update files TCOMMAN (commands linked by form) and TCRTDEV (option **38** on worklist...commands linked by object).

Truly yours,
